* The application enabling NFC data transmission will be available for download from summer 2011.

**Requires subscription to sp mode.
Due to the possibility of excessive communication charges, we strongly recommend users sign up for a flat-rate packet service, such as Pake-hodai FLAT. Under such a service, packet communication fees are charged as communications via external devices such as PCs. When the tethering function is engaged, all packet communication is treated as communications via an external device, even if no such connection is used. When finished communicating via an external device, users should disengage the tethering function.
Users signed up for an all-inclusive FOMA flat-rate data plan can access this service up to the monthly charge limit.
When the tethering function is engaged, sp mode functions other than Internet connection and email service cannot be used.
Online applications such as browsing and games may not function normally on an external device depending on the user's environment.
In the default setting, the link between the external device and the smartphone/tablet is not protected by a password or other security measures. We highly recommend the use of password-protected security measures.

***14 Mbps service is expected to be available from early June. The transmission speed is the theoretical maximum. Services will be provided on a best-effort basis and speeds may vary depending on network traffic or transmission environments. Even within FOMA HIGH-SPEED service areas, communications speeds may be limited to 384 Kbps depending on the location. With FOMA service outside HIGH-SPEED areas, both the maximum uplink and downlink is 384 Kbps.
